

Superseded-Engine heat: 120 °C absorption heat remains under-predicted

--- Kim and Svendsen 2007 calculated (n = 37, AARD 18.4 %, mean dev +1.9)
 --- Kim et al. 2014 calculated (n = 11, AARD 21.7 %, mean dev +4.1)

--- Kim and Svendsen 2007 calculated (n = 29, AARD 14.2 %, mean dev -7.8)
 --- Kim et al. 2014 calculated (n = 9, AARD 7.7 %, mean dev -0.8)

--- Kim and Svendsen 2007 calculated (n = 20, AARD 53.2 %, mean dev -18.8)
 --- Kim et al. 2014 calculated (n = 7, AARD 12.3 %, mean dev -11.2)

Calculated on the superseded Engine 8438ce5f (wheel 40fba7cf); the MEA heat calculation is not yet rebuilt on the pinned Engine (MEA #96). Circles are observed intervals and dashed lines connect calculated intervals, one color per source. Statistics compare them: mean dev = mean(calculated – observed) in kJ/mol CO₂.
