

Absorption heat: 120 °C holdout remains under-predicted

--- Kim and Svendsen 2007 calculated (n = 37, AARD 10.9 %, mean dev -1.3)
--- Kim et al. 2014 calculated (n = 11, AARD 14.8 %, mean dev +1.2)

--- Kim and Svendsen 2007 calculated (n = 29, AARD 9.4 %, mean dev -6.5)
--- Kim et al. 2014 calculated (n = 9, AARD 6.0 %, mean dev +1.3)

--- Kim and Svendsen 2007 calculated (n = 20, AARD 56.3 %, mean dev -13.3)
--- Kim et al. 2014 calculated (n = 7, AARD 5.1 %, mean dev -4.7)

Finite-dose total-enthalpy differences on the pinned Engine's record-anchored calorics; intervals whose endpoint failed are observed only. Circles are observed intervals and dashed lines connect calculated intervals, one color per source. Statistics compare them: mean dev = mean(calculated – observed) in kJ/mol CO₂.
